SOLUÇÃO

Answer code:

```
x = triangular_solve([b, d, a, c], ['C', 'A', 'D', 'B'],  
list2vec([6, -4, 3, 8]))
```

Visualization of the system of equations:

$$\begin{array}{lll} a \cdot x = 3 & \rightarrow & 1x_B + 5x_D = 3 \\ b \cdot x = 6 & \rightarrow & -2x_A + 1x_B + 4x_C + 5x_D = 6 \\ c \cdot x = -8 & \rightarrow & 2x_B = -8 \\ d \cdot x = -4 & \rightarrow & 2x_A + 3x_B + 3x_D = -4 \end{array}$$

Note that it is not easily organized as a triangular system.

Another visualization (triangular-shaped):

$$\begin{array}{lll} b \cdot x = 6 & \rightarrow & 4x_C - 2x_A + 5x_D + 1x_B = 6 \\ d \cdot x = -4 & \rightarrow & 2x_A + 3x_D + 3x_B = -4 \\ a \cdot x = 3 & \rightarrow & 5x_D + 1x_B = 3 \\ c \cdot x = -8 & \rightarrow & -2x_B = -8 \end{array}$$

The [X,X,X,X] choice as [b, d, a, c] is based on the order of:

$$\begin{array}{l} b \cdot x = 6 \\ d \cdot x = -4 \\ a \cdot x = 3 \\ c \cdot x = -8 \end{array}$$

The [Y,Y,Y,Y] choice as , ['C' , 'A' , 'D' , 'B'] is based on the order of:

$$4x_{\textcolor{red}{C}} - 2x_{\textcolor{red}{A}} + 5x_{\textcolor{red}{D}} + 1x_{\textcolor{red}{B}} = 6$$

The list2vec[Z,Z,Z,Z] choice as [6, -4, 3 , 8] is based on the order of:

$$b \cdot x = \textcolor{red}{6}$$

$$d \cdot x = \textcolor{red}{-4}$$

$$a \cdot x = \textcolor{red}{3}$$

$$c \cdot x = \textcolor{red}{-8}$$
